SUMMARY

AI safety researcher working on mechanistic interpretability and adversarial robustness: building white-box monitors for AI control, then attacking them with adaptive attackers. Ten accepted papers in 2025–26, including three at NeurIPS 2026 workshops with Manan Wadhwa and a first-author paper at ATTRIB (NeurIPS 2026). Now working on control and interpretability for non-model capability gains.

EXPERIENCE

MARS V, Meridian AI Research Summer · ***Fellow, White-Box Techniques for AI Control*** Jul 2026 – Present

- Compliance probes on four instruction-tuned models from three labs; a red/blue co-evolution loop across three attack families found jailbreak success and probe evasion mutually exclusive.
- Deployment lesson: every probe keeps a false positive rate, so monitoring needs a cascade, not one probe. Built Whetstone, the open-source harness. 8×B200 SLURM cluster.

Lexsi Labs · ***AI Researcher, Tabular Foundation Models Lab*** 2026 – Present

- Attributing tabular foundation model behavior to synthetic pretraining data. Three workshop papers (NeurIPS, ICML 2026).

Redarc Labs · ***Co-founder and Research Lead, Delhi*** 2026 – Present

- Run a six-person AI safety fellowship; mentor three first-author projects (two under review at NeurIPS 2026 workshops); wrote and teach an eight-session mechanistic interpretability curriculum.

Secure AI Futures Lab · ***Special Projects Fellow*** 2026 – Present

- Teaching the Redarc interpretability bootcamp in person at the Delhi hub; weekend reading groups.

Apart Research · ***Research Fellow*** Nov 2025 – Present

- Hessian-trace analysis of ViTs and ResNets under seven attacks: a five-order-of-magnitude gap between input- and parameter-space curvature. Lead author, TAIS 2026.

AI Institute of South Carolina · ***Research Intern*** Jan 2025 – Apr 2026

- Designed the fairness-aware speculative decoding in AMBEDKAR: religion bias down 77%, caste bias down 23%, at 6% latency.

OPEN SOURCE

- **whetstone**: Red×Blue harness for adversarial safety-monitor research. **dead-salmon-fpr**: a calibrated null for interpretability claims. **neuron_autolabel**: auto-interpretability scored by detection AUC.

EDUCATION

IIT Madras, BS in Data Science 2023 – 2027

Maharaja Agrasen Institute of Technology, B.Tech, Mechanical and Automation Engineering 2022 – 2026

SKILLS

Methods	QK/OV decomposition, direct logit attribution, activation patching, steering vectors, linear probing, SAE feature attribution, nanoGCG attacks, Hessian trace
Stack	Python, CUDA, PyTorch, JAX, TransformerLens, NNsight, Hugging Face, SLURM (multi-node)
